Who We Are

ABS Air Services is a Delhi-based logistics company handling domestic courier delivery, international parcel and document shipping, e-commerce fulfilment support, and air cargo and freight forwarding. We work with individuals sending personal shipments as well as businesses that need dependable, repeatable shipping across a mix of destinations and consignment sizes.

Domestic Courier Delivery

Within India, we move everything from same-day documents inside Delhi-NCR to multi-day consignments reaching smaller towns across the country. Service speed depends on the origin-destination pair and the transport mode used — air-connected routes to major metros are typically fastest, while surface delivery covers the rest of the country at lower cost.

Available options:

- Same-day and next-day delivery across Delhi-NCR
- Standard pan-India delivery for non-urgent shipments
- Cash-on-delivery collection for retail and online orders
- End-to-end tracking from pickup through final delivery

International Courier & Parcel Shipping

Sending a shipment abroad involves pickup, documentation, customs clearance at both ends, and final delivery — coordinated with airline cargo schedules. Being based near Delhi's international cargo terminals allows for later cut-off times and faster onward connections than routing through smaller regional airports.

For personal shipments, we handle documents, gifts, and parcels with door-to-door pickup and delivery. Packages should be sized to their contents, sealed securely, and accompanied by an accurate customs invoice stating the declared value and purpose of shipment — this is the single biggest factor in avoiding customs delays.

Shipping Support for Businesses

Companies that ship internationally on a recurring basis need more than a one-off booking process. We support businesses with consolidated billing, scheduled pickups aligned to warehouse hours, and dedicated assistance when a shipment needs customs follow-up. Commercial shipments typically require a commercial invoice, packing list, and — depending on the destination and product category — a certificate of origin or other supporting permits.

Businesses shipping in volume can also benefit from rate structures based on weight slabs and destination zones, which brings down the effective per-shipment cost as order volumes grow.

E-commerce Fulfilment Support

Online sellers need a courier partner that can absorb order volume spikes without a drop in delivery performance. Beyond standard delivery, we support the parts of e-commerce logistics that create the most friction for sellers:

- Reverse pickup for customer returns and exchanges
- COD collection with reliable remittance to the seller
- Shareable tracking links for a better post-purchase experience
- Consistent performance across metro and non-metro pin codes

Air Cargo & Freight Forwarding

For consignments too large or too heavy for standard courier channels — palletized goods, machinery parts, bulk inventory, or project cargo — we arrange air freight movement through airline and consolidator partners. Freight is priced volumetrically rather than per shipment, and generally becomes more cost-efficient than courier once volume passes a certain threshold.

A typical freight movement includes space booking, terminal handover, customs processing, flight movement, and destination clearance — each with its own lead time, which is why advance planning matters more for freight than for small parcels.

Documentation, Handled Right

Most international shipping delays trace back to paperwork rather than transport. We assist with the core documents every cross-border shipment needs:

- Commercial invoice and packing list, accurately valued and described
- Airway bill covering routing and terms of carriage
- Certificate of origin, where required by the destination country
- Dangerous goods declarations and import permits for regulated items

Why Ship With Us

Location advantage	Based near Delhi's international cargo terminals, enabling later cut-offs and faster onward connections.
One partner, full range	Domestic courier, international parcels, e-commerce support, and air freight under a single point of contact.
Documentation support	Help with invoices, airway bills, and customs paperwork to reduce hold-ups before they happen.
Transparent tracking	Visibility from pickup through final delivery, shared directly with you or your customers.

Get in Touch

For rate quotes, service availability to a specific destination, or help choosing between courier and freight for a shipment, reach out directly — we're happy to walk through the options that fit your requirements.
